We Claim:

1. In an electronic device interfaced with a display surface, a method, comprising the steps of:

providing two electronic diagrams, said electronic diagrams having blocks representing\components of a system;

determining corresponding features of said electronic diagrams that are present in both of said electronic diagrams;

determining differences between said electronic diagrams; and programmatically merging differences copied from a selected one of said two electronic diagrams into the other of said electronic diagrams at a corresponding location in said other electronic diagram.

2. The method of claim \ wherein said programmatically merging differences comprises the further step\of:

replacing data elements of said other electronic diagram with copied differences from said selected one of said two electronic diagrams.

- 3. The method of claim 2, comprising the further step of:
- 20 cascading hierarchically the replacement of data elements wherein said data elements being replaced are arranged in a tree structure, said tree structure having parent data elements with child data elements attached thereto, said child data elements being replaced when said parent data element is replaced.
- 4. The method of claim 3 wherein only said child data elements are replaced. 25
 - 5. The method of claim 1, comprising the further steps of:

categorizing said differences between said two electronic diagrams as functional differences and graphical differences, said functional differences controlling the performance of a system represented by said electronic diagram, said graphical differences affecting the appearance of said electronic diagram displayed to a user;

10

15

15

copying all of said functional differences from said selected one of said two electronic diagrams;

copying less than all of said graphical differences from said selected one of said two electronic diagrams; and

inserting the copied functional differences and graphical differences into corresponding sections of said other electronic diagram, said copied functional and graphical differences being inserted in the corresponding section of said other electronic diagram.

10 6. The method of claim 5, comprising the further steps of:

cascading hierarchically the replacement of data elements in said other electronic diagram wherein said data elements being replaced are arranged in a tree structure, said tree structure having parent data elements with child data elements attached thereto, said child data elements in said other electronic diagram being replaced when said parent data element is replaced.

7. The method of claim 5, comprising the further steps of:

cascading hierarchically the replacement of data elements in said other electronic diagram, wherein said data elements being replaced are arranged in a tree structure, said tree structure having parent data elements with child data elements attached thereto, said child data elements of corresponding parent data elements in said two electronic diagrams being replaced without replacing the corresponding parent data element.

8. The method of claim 1, comprising the further steps of:

highlighting the differences in said electronic diagrams for a user on a display surface of a display device, said display surface showing both of said diagrams; and updating said display surface following the performance of said merging operation, said updating showing the differences copied to said other electronic diagram.

15

20

- 16 -

9. The method of claim 8, comprising the further steps of:

determining a distance on said display surface from an endpoint of a line to an updated connection point for a block in said electronic diagram, said updated connection point being the connection point of a line and a block following a merge operation;

comparing said distance to a pre-defined parameter, said pre-defined parameter being a distance value;

extending said displayed arrowed line to said updated connection point when said distance is less than said pre-defined parameter.

10 10. The method of claim 9, comprising the further step of:

replacing said line with a new line drawn to said updated connection point when said distance is at least as large as said pre-defined parameter.

11. The method of claim 1, comprising the further steps of:

presenting said differences in said electronic diagrams on a display surface of a display device, said display surface split to show both of said electronic diagrams;

highlighting a difference item in said selected one of said two electronic diagrams;

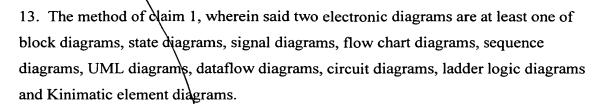

highlighting a difference item in said other electronic diagram that corresponds to the matching highlighted difference in said selected one of said two electronic diagrams; and

replacing the highlighted difference item in said other electronic diagram with a copy of the highlighted difference item from said selected one of said two electronic diagrams.

12. The method of claim 11 comprising the further step of:

replacing a data element in a highlighted difference item in said other electronic diagram, said data element being a child data element in said other electronic diagram, said data element being part of a tree structure, said tree structure having parent data elements with child data elements attached thereto.

25

- 14. The method of claim 1, wherein said electronic diagrams depict multiple domains
- 15. In an electronic device, a method, comprising the steps of:

providing two state diagrams of a system, said state diagrams having blocks
joined with lines, each of said blocks representing states in a system, said lines
representing transitions between said states, said transitions taking place upon the
occurrence of a specified event;

determining corresponding features of said state diagrams that are present in both of said state diagrams;

determining differences between said state diagrams, said differences being recorded as a list of data elements; and

merging differences from a selected one of said state diagrams into the other of said state diagrams, said merging copying said differences from the selected one of said state diagrams and inserting said differences in said other state diagram.

20

15

16. The method of claim 15 wherein said metging differences comprises the further steps of:

replacing data elements of said other state diagram with copied differences of data elements from said selected one of said state diagrams.

25

30

17. The method of claim 15, comprising the further steps of:

categorizing said corresponding features as functional features and graphical features, said functional features controlling the performance of the system represented by said state diagram, said graphical features affecting the appearance of said state diagram displayed to a user;

determining differences in said functional features and said graphical features of said state diagrams;

15

20

30

- 18 -

copying all of said differences in functional features from said selected one of said state diagrams;

copying less than all of said differences in graphical features from said selected one of said state diagrams; and

inserting the copied functional feature differences and graphical feature differences into corresponding sections of said other state diagram, said copied differences replacing data elements in the corresponding section of said other state diagram.

18. In a network that includes an electronic device, said electronic device interfaced with a display surface, a method, comprising the steps of:

retrieving over said network two electronic diagrams, said electronic diagrams having blocks joined with lines, each of said blocks including connection points where said lines join said blocks;

displaying said electronic diagrams to a user on said display surface;

determining corresponding features of said electronic diagrams that are present in both of said electronic diagrams;

determining differences between said electronic diagrams, said differences being recorded as a list of data elements; and

merging differences from a selected one of said electronic diagrams into the other of said electronic diagrams, said merging copying said differences from the selected one of said electronic diagrams and inserting said differences in the other of said electronic diagrams.

25 19. The method of claim 18, comprising the further steps of:

categorizing said differences between said electronic diagrams as functional differences and graphical differences, said functional differences controlling the performance of the system represented by said electronic diagram, said graphical differences affecting the appearance of said block diagram displayed to a user;

copying all of said functional differences from selected one of said electronic diagrams;

10

15

20

25

30

copying less than all of said graphical differences from said other electronic diagram; and

inserting the copied functional differences and graphical differences into corresponding sections of said other electronic diagram, said copied graphical and functional differences replacing data elements in the corresponding section of said other electronic diagram.

20. In an electronic device interfaced with a display surface, a medium holding computer-executable instructions for a method, said method comprising the steps of:

providing two electronic diagrams, said electronic diagrams having blocks representing components of a system, said blocks connected by lines;

determining corresponding features of said electronic diagrams that are present in both of said electronic diagrams;

determining differences between said electronic diagrams; and programmatically merging differences copied from a selected one of said two electronic diagrams into the other of said electronic diagrams at a corresponding location in said other electronic diagram.

21. The medium of claim 20 wherein the step of merging differences in said method comprises the further step of:

replacing data elements of said other electronic diagram with copied differences from said selected one of said two electronic diagrams.

22. The medium of claim 20 wherein said method comprises the further step of: categorizing said differences between said two electronic diagrams as functional differences and graphical differences, said functional differences controlling the performance of a system represented by said electronic diagram, said graphical differences affecting the appearance of said electronic diagram displayed to a user;

copying all of said functional differences from said selected one of said two electronic diagrams;

copying less than all of said graphical differences from said selected one of said two electronic diagrams; and

inserting the copied functional differences and graphical differences into corresponding sections of said other electronic diagram, said copied functional and graphical differences being inserted in the corresponding section of said other electronic diagram.

5

23. The medium of claim 20 wherein said method comprises the additional steps of:
determining differences in at least one additional electronic diagram; and
merging said differences from at least one additional electronic diagram into said
electronic diagrams.

10

24. The medium of claim 20 wherein said method comprises the additional steps of:
determining differences in at least one additional electronic diagram; and
merging said differences from at least one additional electronic diagram into a
single electronic diagram, said diagram being stored in a configuration management
system.

15
